Hello GPIS family!

Welcome to our week nine newsletter! This week we had students and parents of year three and year two meeting their teachers for a small interaction on the progress of children and other matters. A lot more happened this week. Seat back and let us tell you about it all!

## **Memory Verse of October**

## **Reminders!**

- End of term 1 exams begin on Tuesday 26th October and end on Thursday 28th October 2021
- Term 1 will end on Friday 5th November, 2021
- Friday 5th November will be half day meaning that school will end at midday. Parents will be required to pick report cards from school.
- Term 2 will begin on Monday, 22nd November, 2021.

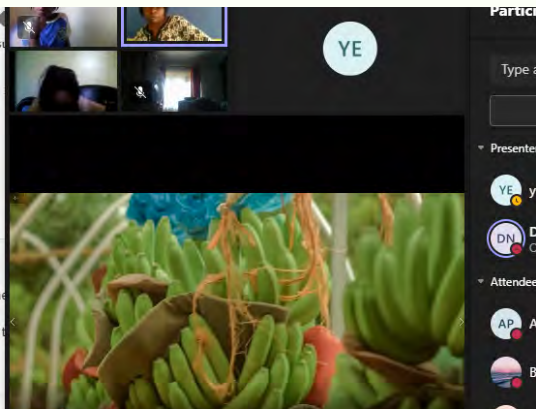

## THIS IS WHAT WEEK NINE LOOKED LIKE !

### Year One Star of the week!

Daoud has been exceptional in class this week! He has not missed any single class and is very quick to participate when asked by his teachers! We are really proud of you Daoud and you are our star of week Nine! Congratulations and keep it up!

### YEAR ONE

### Global Perspectives.

What is your favorite fruit?

Do you know how it gets to the supermarket or the market?

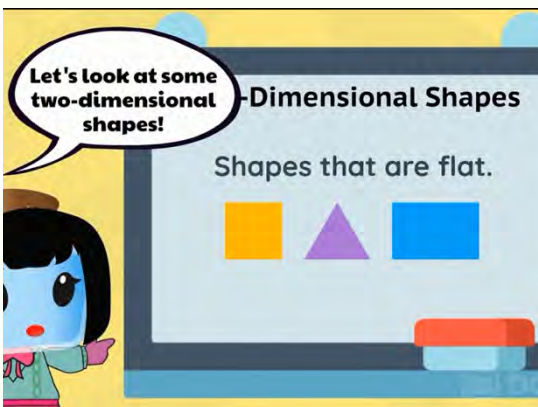

Teacher Darlison taught us all about how fruits get to our tables at home.

Fruits begin their life as small flowers. These small flowers then grow into a small flower in the middle. The fruit then grows larger and larger.

Inside, it starts becoming juicy and sweet.

Teacher Darlison asked us to draw our favorite fruit, color it and tell her how it gets to our plates at home!

### YEAR TWO

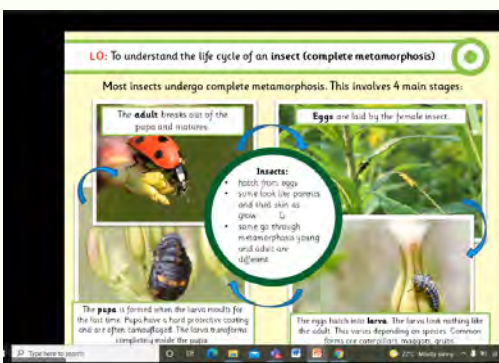

### Maths.

Do you know what 2-dimensional means or what 2-dimensional shapes are?

Did you know that 2D means just the same as 2-dimensional?

This week in Maths, we learnt all about 2D shapes. Tr Julie taught us that 2D shapes are flat and only have two dimensions: length and width and with no thickness or depth. If a shape has two dimensions, it means there are 2 ways it can be measured in space. They include squares, rectangles, circles, triangles and many more.

### YEAR THREE

### Science

A life cycle is the series of changes an animal goes through during its life. There are two different types of insect life cycle - incomplete metamorphosis and complete metamorphosis. (Metamorphosis means a change of form.)

Some insects have a four-stage life cycle. The insect lives as an egg, larva (LAR- vuh), pupa (PYOO-puh), and an adult. Others have a three-stage life cycle. The insect is born as an egg, hatches as a nymph, and changes into an adult. The egg hatches and a larva comes out. The larva looks like a worm and eats and eats so that it can grow much bigger.
